HOW THE BRIEF MHQ IS SCORED

Overview

The brief version of the MHQ contains 12 items with responses on a 1 through 5 Likert scale regarding several aspects of hand function. Eight of the items are reversed and recoded, as indicated below. All of the items are totaled and then normalized to yield a summary score on a scale of 0-100. Higher scores indicate better overall functioning and satisfaction. Respondents must answer every question in order to calculate the brief MHQ summary score. The brief MHQ does not distinguish between hands.

Reverse Coding

Higher scores indicate better functioning. Therefore, the following items must be reversed before totaling to create the summary score:

- 1. Overall, how well did your hand(s) work during the past week?
- 2. How was the sensation (feeling) in your hand(s) during the past week?
- 3. How difficult was it for you to hold a frying pan during the last week?
- 4. How difficult was it for you to button a shirt or blouse during the past week?
- 8. Describe the pain in your hand(s)/wrist(s) in the past week?
- 9. I am satisfied with the look of my hand(s).
- 11. In the past week, how satisfied are you with the motion of your fingers?
- 12. In the past week, how satisfied are you with the motion of your wrist?

For these items, the responses must be reversed in the following way: 1=5, 2=4, 4=2, 5=1

Scoring

Raw score range:

Minimum score (poorest functioning) = 1 Maximum score (ideal functioning) = 5

After averaging the items, the raw score is then normalized to generate a score that is scaled from 0 (poorest function) to 100 (ideal function).

Normalization = 100 x (brief MHQ raw score -1)/4
